

New Build

Scheme Details

New Build (D&B) of a 5 storey self storage facility and associated external works for our Client Big Yellow. This was a particularly challenging project as we were constructing this new facility next to a network rail line. This meant additional complexities with regards to both logistics and engineering solutions. The job entailed sheet piling, CFA Piling (3 different pile diameters), a ground floor slab consisting of different build ups with a mix of traditional concrete and waterproof concrete, along with cantilevered upper floors.

Value: £3.4m
 Programme: 46wks
